

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Application of :
Ronald STEIGER :
Serial No. Not yet assigned : Group Art Unit: Not yet assigned
Filed: herewith : Examiner: N/A

For: A SPRAYING METHOD AND A SPRAY SYSTEM FOR COATING LIQUIDS

PRELIMINARY AMENDMENT

Assistant Commissioner For Patents
Washington, D.C. 20231

Dear Sir:

Preliminary to examination of the above-referenced application, please amend the application:

IN THE CLAIMS:

Please amend claims 3, 8 and 10 as follows:

3. (Amended) Spraying method as claimed in claim 1, characterized in that a compressed gas, preferably compressed air, is used as the coolant.

8. (Amended) Spray system as claimed in claim 6, characterized in that the coolant is a compressed gas, preferably compressed air.

10. (Amended) Spray system as claimed in claim 6, characterized in that it comprises a cooling element (10) of the cooling unit (6) to cool the coolant, where said element is configured at the spray system (2) or is integrated into it.

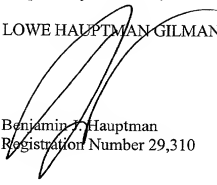

REMARKS

The above-referenced application is amended to delete the multiple dependencies of claims 3, 8 and 10.

Attached hereto is a marked-up version of the changes made to the claims by the current amendment. The attached pages are captioned "Marked-Up Version Showing Changes".

Respectfully submitted,

LOWE HAUPTMAN GILMAN & BERNER, LLP

CLAIMS

1. A method for spraying coating liquids, whereby coating liquid is sprayed from a spray system through a liquid atomizer in the form of an irrotational nozzle or in the form of a rotary atomizing element onto an object to be coated,

characterized in that at least one component (4) of the spray system (2), where the coating liquid may deposit on said component and cure on it, shall be cooled by a fluid, cooled coolant that is fed to said component during spray coating in order that the cooling of this component (4) shall reduce or prevent the adhesion and/or the drying rate and the layering of coating liquid on a surface (24) of said component.

2. Spraying method as claimed in claim 1, characterized in that the coolant is fed to the liquid atomizer, in particular when latter is a rotary atomizing element (4) in order to cool a surface (24) at said atomizer, where said surface is in ambient air and under the stream of liquid coating.

3. Spraying method as claimed in ^{claim 1} [either of claims 1 and 2] characterized in that a compressed gas, preferably compressed air, is used as the coolant.

4. Spraying method as claimed in claim 3, characterized in that the compressed gas is blown onto a surface (22) of the component (4) to be cooled, where the coating liquid does not stream over said surface.

COPIES OF 10 15 20

(22) of the component (4) to be cooled, where the coating liquid does not stream over said surface.

10.

Spray system as claimed in ^{claim 6} ~~one of claims 6 through 9~~ characterized

in that it comprises a cooling element (10) of the cooling unit (6) to cool the coolant, where said element is configured at the spray system (2) or is integrated into it.
